♦ Ingredients and effect	 <p>Nuts of the argan tree</p> <ol style="list-style-type: none"> 1. Poppy seed oil: is a very valuable oil, freshly pressed in small lots. It contains around 85 % of unsaturated fatty acids and a high content of vitamin E, making poppy seed oil an ingredient with excellent nourishing properties for skin care. 2. Argan oil: the most expensive plant oil worldwide, with a particularly high content of alpha-tocopherol – a substance that shows the highest level of “vitamin E” activity. It is a truly unique cosmetic, especially for dry, mature and damaged skin. 3. Calendula oil: Produced through a laborious maceration process, this oil is especially valuable as it accumulates the luminous and vital power of the sun, illuminating body, soul and spirit. It enhances the formation of new cells and deeply penetrates the skin with its essence and properties. 4. Grape seed oil: the so called “green gold” has a high content of unsaturated fatty acids (over 90 percent, of which 70 percent are essential linoleic acid). Its bio-active components (such as procyanidin, a “radical scavenger”) are largely preserved even at temperatures of more than 190°C.
♦ Goes well with	Black Berry & Calendula skin care lines
♦ Skin type	Dry, mature and dehydrated skin
♦ Psychological action (scent)	Stimulating, fresh, vitalizing
♦ Effects on skin	Nurturing cream rich in vitamins and precious organic oils from controlled organic cultivation – these phytonutrients are highly efficient radical scavengers, providing for optimal cell protection and smoothing little wrinkles in a natural way. Due to its creamy/oily texture and excellent smoothness, this rich cream is a real alternative to our rich creams, packs and oils.
