Ölen, * allergenics in essential oils, ** pure essential oils, *** controlled organic cultivation
Substances and effects	Black currant seed oil contains a high percentage of oleic acids (linoleic acid) and very rare unsaturated fatty acids. Both stabilize the outer barrier layer and ensure natural skin moisture. It fits of free radicals, accelerates the metabolic process and makes your skin resistant and robust.
	Shea Butter: We only use shea butter that is extracted traditionally without adding any chemicals. The shea nuts are collected and stored until they reach the optimal degree of ripeness. Then the nuts are steamed and the thereby gained mass is gently heated up to 50 to 60° C. The shea butter melts, detaches from the shells and is skimmed off. Due to this gentle extraction all the healing and caring substances maintain.
Black Currant / Cassis	Avocado oil : Due to its' high percentage of unsaturated fatty acids and linoleic acids, avocado oil nurtures and protects your skin – especially dry, scaly and sensitive skin. It resembles the natural skin oil and has a good deep-layer effect.
Combine with	Calendula, Black Berry and Aloe Vera Caring Line
