♦ Ingredients and effect	<p>Menthol stands for sustainable freshness. It acts cooling, inspiring, and is very popular for sauna sessions and because of its refreshing effect very often used in sport and summer shower gels. The cooling effect is due to the fact that the menthol binds to the skins cold receptors and there releases a feeling of coldness. Thus not having an impact on the body temperature. Beside its refreshing feature the natural menthol (natural, because of the high menthol demand is also being produced synthetically) works when suffering from itching and has pain relieving effects. For this reason it is often contained in medicines to cure skin diseases and sport injuries.</p> <p>Jasmine oil, one of the most expensive oils on the world market. One kilogram of pure jasmine oil is made of app. 8 millions plant blossoms (app. one ton). Further it has an aphrodisiac effect and also a decramping effect, soothing all kinds of pain on a very natural and gently way. The sensual and inspiring fragrance opens up hearts and makes emotions flow.</p>
